

QUALITEAM - <http://www.qualiteam.com/>

Qualiteam was founded in 1999 by [Doris Hjorth](#), who had 20 years of business experience in the cardiovascular field and in addition a background as a cardiovascular nurse and a US certified perfusionist. Initially Qualiteam was a consultancy and distribution company of heart valves and cardiovascular surgery products. In 2004 Doris developed and patented her first postoperative care product for sternotomy patients, the [QualiBreath](#) sternum support. The production and manufacturing of the QualiBreath were organized at the Qualiteam facilities in Northern Italy and only 100% Italian raw materials used.

The QualiBreath sternum support quickly became very successful and has now been joined by other specialty postoperative care products developed by Doris, such as the [QualiBra](#) Breast support for fuller-sized women who have had a sternotomy, the [QualiBelly Advanced](#) abdominal support for critical intentions and the [QualiMaternity](#) for advanced maternity care.
