

Vestfrost Solutions is a global developer of innovative and efficient refrigerators and freezers for the professional market.

We create customer-driven and energy efficient solutions with our team of cooling technology experts and market specialists. We provide highest value for money by offering the right solution with the lowest operating costs for our customers – and their customers. In close cooperation with you, we can turn innovative ideas into efficient refrigerators and freezers. This is how we define being **your preferred partner**.

Biomedical Solutions

Vestfrost Biomedical Solutions are reliable and user-friendly refrigerators and freezers specially designed for hospitals, health clinics, universities, laboratories and pharmacies.

Serving Global Needs and Requirements

Our biomedical solutions serve global needs and requirements of the entire health sector – from the small health clinic in the village with no electricity to the high-tech hospital in the metropolitan. We cover temperatures from +20°C to –86°C via energy efficient solutions with low running costs.

Safe Operation and Reliable Temperatures

Accurate and safe storage is vital to secure quality of vaccines and medicine. Benefitting from our 50-year long history, we have gained vast expertise to develop biomedical refrigerators and freezers with an uncompromised focus on safe operation and reliable temperatures.

Benefits

1. Low Energy Consumption

Low energy use means lower operating costs and better value for money.

2. Temperature Precision

Preserving highest quality of stored contents with reliable temperatures.

3. Long Product Lifetime

Quality equipment made to be an investment for many years!
